

Assignment-3: Build an anonymous feedback application

Ahmed Shamim • Jun 26 (Edited Jul 10)

10 points

Due Jul 13, 11:59 PM

In this assignment, you will build a very simple, minimal 'Anonymous feedback application'.

Anyone can register in this app and get a 'Unique shareable link' to collect feedback from others. The user can see the given feedback on his/her Dashboard.

Requirements:

- You should use the following HTML template for building the app.
- Implement the Registration and login functionality and show the dashboard only to the logged-in user.
- Using the 'Feedback form' link, anyone can share their feedback without logging into the app.
- Use 'File' to store all kinds of data. **Don't use a Database.**
- Try to keep your code clean and follow the best practices.

Feel free to ask if you have any confusion or questions about the assignment.

Good luck! 🚀
